RE: Lake Pflugerville Water Quality

Mr. Richmond,

Per our discussion on March 15, 2022, I wanted to assure you that the water quality in Lake Pflugerville is of good quality with little to no concerns with the water quality in the reservoir. As the reservoir is the primary drinking water supply for the City of Pflugerville, we take the quality of the water within the reservoir very seriously and monitor it continuously for various drinking water quality parameters while also sampling for contaminants that are emerging contaminants in the water supply industry and also for contaminants that would be important for those in our community that use the reservoir for various recreational activities.

I have attached to this e-mail the most recent sampling results for both cyanotoxins and E. coli for your reference and review. As you will be able to tell from our sample results, we have shown no indicators of any concerning contaminants within the reservoir. If there is something else that I can provide or answer, please don't hesitate to reach out and let me know via e-mail at brandonp@pflugervilletx.gov.

Regards,
